- GBAO designed the questionnaire for this national survey of American Jews for J Street. The survey was conducted March 23-25, 2026, and included interviews with 800 self-identified American Jews who are registered to vote. The survey is subject to a margin of error of +/- 3.5 percentage points at the 95 percent confidence level. Sub-groups are subject to a higher margin of error.
- The survey sample was drawn from a national voter file, consisting of all registered voters in the United States. Respondents with a likelihood of being Jewish, based on their first or last name or their geography, were contacted by text, and then took the survey on a secure link on their phone or computer if they identified themselves as Jewish.
- All respondents were asked at the beginning of the survey whether they consider themselves Jewish, using the same question wording as the 2020 Pew Research Center study, “Jewish Americans in 2020.”
- The sample was weighted to Pew’s demographic results on key variables, such as gender, denomination, age, and synagogue membership.
